Jacquard Removable Water-based Resist

This ready-to-use resist easily washes out with warm water (even after steaming or setting), revealing the white or colored silk beneath. Removable Water-based Resist keeps the silk completely soft to the touch and allows artists to create layered designs, as in batik. It holds a crisp line without spreading and does not shrink or pucker when dry. Removable Water-based Resist may be tinted with any water-based dye for colored lines. It is screenable, odorless, alcohol-free and non-toxic.

NOTE: Separation in the bottle is normal. Stir well before using.

1. Apply the resist using a brush, silk screen, stamp or applicator. Be sure that the resist penetrates all of the way through the fabric. For heavier fabrics, thinning with a small amount of water may improve penetration.

2. When using the fine line applicator, draw the design on the fabric with smooth strokes. Make sure that the lines are all connected to prevent any color from bleeding through the gaps in the resist line.

3. Apply any fluid fabric paint like our PRO Silk & Fabric Paints, allow the paint to dry and then set the color with a dry iron using a press cloth over the painted fabric.

4. The resist may then be removed by washing in warm water, at which time the lines in the resist areas will be revealed.

5. This removable resist does not spread when applied or shrink when dry.

6. Removable Water-based Resist may be tinted with any water based dye, like the MX dyes, for creating colored lines. With proper fixation the color in the resist will remain in fabric after washing.
